

China Green Building Council of CSUS Shenzhen Green Building Association

Pre-notification on the Convening of the 14th Conference on Green Building in Tropical and Subtropical Region (Hot Summer and Warm Winter Zones)

All Relevant Units,

The Conference on Green Building in Tropical and Subtropical Region (Hot Summer and Warm Winter Zones) is a seminar for promoting regional green building development, jointly initiated by the China Green Building Council of CSUS and relevant green building organizations in tropical and subtropical countries. It is hosted in turn by the green building organizations of participating countries. In 2010, the “Inaugural Conference of Tropical and Subtropical Green Building Council Alliance& the 1st Technology Development Forum” was held at the Shenzhen Civic Center. Over the past decade or so, the conference has become an important platform for information and technology exchange in the field of green building in tropical and subtropical region. It has been successfully held in Guangdong, Fujian, Guangxi, Hong Kong, Macao, and other regions of China, as well as in Singapore, Malaysia, and other countries.

To further promote regional exchanges and jointly discuss the industry development, the 14th Conference on Green Building in Tropical and Subtropical Region(Hot Summer and Warm Winter Zones), co-hosted by China Green Building Council of CSUS and the Shenzhen Green

Building Association, is scheduled to be held in Shenzhen on December 7 to 9, 2026. Following are pre-notification details concerned with the conference:

I. Overview

Nowadays, human society is facing a worsening climate crisis, profound technological changes, and complex economic transformation. This conference aims to make a key breakthrough - shifting from a forum focused on technical exchanges to a conference exploring goals and values. The conference will be centered on three core issues of green and low-carbon buildings—economy, value, and technology—for discussion. Featuring a keynote forum that raises macro-level questions and parallel sub-forums which engages in practical responses, the conference is designed to bring about a high level, cross-disciplinary and internationalized intellectual feast that will lead a “cognitive revolution” in the industry and offer proactive insights for the future development of green buildings in the region.

II. Conference Name and Theme
